COMPANY : A leading pharmaceutical conglomerate**PRODUCT** : MPLS VPN, PRI, ILL and Leased Line**HIGHLIGHT** : Secure inter-office connectivity

A leading pharmaceutical conglomerate, catering to the global market with an array of products and services, grew to become one of the largest global outsourcing partners for pharmaceutical companies. This enterprise was formed in 1983, followed by a joint venture in the year 1995, for the manufacture of chlorhexidine and derivatives for the European market. Currently, in the pharmaceutical industry, they offer cost-effective technical solutions to a base of customers around the world in chemical development, commercial manufacture and supply of active pharmaceutical ingredients. It has also established itself as a reliable partner across the global pharmaceutical market, by adding value to businesses and customers.

This enterprise and its subsidiaries are spread across the globe, and continue to function independently.

The Requirement

The client required a secure network to safeguard business critical data, and to ensure end-to-end connectivity between multiple locations. Since a large quantum of data had to be transferred from third party data centres, corporate offices and factories, the client needed reliable internet connectivity with low latency. Dedicated bandwidth connectivity between multiple points would fulfill these requirements along with voice solutions aimed at building better relationships with customers and various stakeholders.

The Challenge

Since the client had sensitive data that needed to be transmitted along a secure line between offices, data loss and security was of paramount importance. To foster better relationships with stakeholders and customers, a reliable enterprise-grade voice solution was also needed.

Solution

Tata Tele Business Services provided varied solutions to meet the client's requirements while also providing the foundation for improved efficiency in the future. A secure MPLS network was provided. The Tata Tele team has also implemented and managed the entire set up, and provided the client with the infrastructure to manage their internal communications while ensuring data security all over the country. Inter-office connectivity is now possible at high speeds thanks to dedicated leased lines. The PRI solution is allowing for better call quality and scalability.

Benefits

With MPLS VPN, the client could ensure seamless connectivity across multiple locations, and that lead to optimisation of workflow and data.
