What is CDN?
A Content Delivery Network (CDN) is an interconnected system of intelligent machines on the Internet that replicates content at various locations thereby scaling infrastructure for content owners and reducing latency for end users.

Uses of CDN:
- Online Video Delivery
- Website Acceleration
- Electronic Software Delivery

Benefits of CDN:
- Speed
- Scale
- Geographic Diversity
- Capacity
- Security

CDN deployed over 750+ 1G network leverages reach to over 300 countries. Peering with leading ISPs across the globe results in the highest quality of end user experience.

Multi-format video delivery. Streaming platform built ground up for highly scalable HD streaming, any device, anywhere.

Most optimised caching platform to ensure maximum origin offload.

24x7 email and phone support included at no extra cost.
